

DAVID ADESHINA

Mobile App Developer (Flutter / Dart) | Mobile Architect | Cross-Platform Application Developer

dadeshina4@gmail.com | +234 816 516 8979 | Lagos, Nigeria | [linkedin.com/in/dadeshina4](https://www.linkedin.com/in/dadeshina4)

PROFESSIONAL SUMMARY

Flutter engineer with 4+ years designing, architecting, and delivering scalable cross-platform applications for Android and iOS, including production releases across fintech, social, and real-time betting platforms. Builds enterprise-grade mobile applications using Flutter, Dart, Clean Architecture, BLoC/Cubit, Riverpod, REST APIs, Firebase, Socket.io, and CI/CD pipelines (GitHub Actions, Codemagic). Strong background in performance optimization, secure authentication, and real-time communication systems. Combines core software engineering principles with a postgraduate background in Cybersecurity (The University of Texas at Austin) to build secure, maintainable, high-performing applications. Comfortable owning features end-to-end — from technical design through App Store and Play Store deployment — and has stepped into team leadership when needed.

CORE COMPETENCIES

Mobile & Languages

Flutter, Dart, iOS, Android, Cross-Platform Development, React.js, TypeScript, JavaScript

State Management

BLoC/Cubit, Riverpod, GetX, Dartz (Either), Equatable

Performance & Quality

Widget-rebuild minimization, memory profiling, rendering optimization, unit & integration testing, error monitoring

DevOps & Release

Git/GitHub, GitHub Actions, Codemagic, CI/CD pipelines, App Store & Google Play submission, bug tracking

Security

Secure authentication, token/refresh management, RBAC, cybersecurity fundamentals

Architecture

Clean Architecture, feature-first/modular design, repository pattern, dependency injection (GetIt), SOLID principles

UI & Design Systems

Pixel-perfect Figma implementation, reusable widget/component libraries, flutter_screenutil, responsive layouts, custom animations

Backend & Real-Time

REST APIs, Dio, HTTP, Socket.io, Firebase (FCM, Auth), Supabase, webhook integration, PostgreSQL RPC

AI-Augmented Workflow

Daily use of Claude & Claude Code for coding, debugging, test generation, and code review across production apps

Native & Platform

MethodChannel (Kotlin/Swift bridging), deep linking, App Links, push notifications, Unity integration

PROFESSIONAL EXPERIENCE

Flutter Developer

Oct 2025 – Present

TechMadeEasy

- Architect cross-platform Flutter applications using Clean Architecture and modular, feature-based design.
- Lead implementation of scalable BLoC architecture across complex, high-traffic user flows.
- Optimize application performance through widget rebuild reduction, memory profiling, lazy loading, and rendering improvements.
- Partner with designers and backend engineers to translate design systems into production-ready experiences, contributing to engineering best practices and code reviews along the way.

Flutter Developer(Contract)

Jun 2024 – Feb 2026

BuzinessHours

- Built and maintained production Flutter applications for Android and iOS, owning features end-to-end.
- Developed real-time messaging and notification systems using Socket.io, and implemented Firebase Cloud Messaging for push notifications and deep linking.
- Delivered multiple production releases to Google Play Store and Apple App Store.
- Improved application maintainability through modular architecture, reusable components, and GetX-based state management.

Flutter Developer

Jul 2025 – Dec 2025

SMARTROB Technologies

- Designed scalable Flutter applications using Clean Architecture, setting technical direction for feature work.
- Implemented secure authentication and role-based authorization, applying cybersecurity fundamentals to mobile architecture.
- Led implementation of advanced BLoC state management across complex, high-traffic user flows; built background processing, push notification, and deep linking capabilities.
- Optimized rendering performance and responsiveness; collaborated using Git workflows and pull request reviews.

Lead Flutter Developer

May 2024 – Dec 2025

Tek Haven Solution

- Developed enterprise mobile applications with Flutter, building scalable API layers and reusable business logic.
- Integrated Unity modules into Flutter for advanced interactive features — a differentiated technical capability.
- Partnered closely with backend engineers to design efficient API integrations.
- Managed release cycles for Android and iOS, coordinating QA and deployment to the App Store and Play Store.

EARLIER EXPERIENCE

Software Engineer Trainee — SAIL Innovation Lab

Nov 2023 – Apr 2024

Developed web applications with React.js, TypeScript, and JavaScript; integrated third-party APIs and translated business requirements into technical specifications within Agile teams.

Flutter Developer — BerryStamp

Oct 2023 – May 2024

Contributed to design and development in coordination with the engineering team; temporarily led the development team in the manager's absence.

Flutter Developer — Eonace

Feb 2023 – Aug 2023

Developed and optimized cross-platform mobile UI; integrated push notifications, data synchronization, and RESTful APIs, deploying to app stores after QA validation.

EDUCATION

The University of Texas at Austin

2023 – 2024

Postgraduate Degree, Cybersecurity

Middlesex University

2022 – 2023

Bachelor of Science, Information Technology

Aptech Learning

2019 – 2021

Diploma of Education, Computer Software Engineering

CERTIFICATIONS

- Flutter & Dart — The Complete Guide (2022 Edition), Udemy — Credential UC-668ce235-eb4f-4bcb-b508-bb78d06200c4
- Foundations of Cybersecurity, Coursera — Credential 3QBCP5W3J2JG
